1 AIM

The aim and goal of this .PDF document is to serve as the Directory for all Softcon Files available to Clients (installers) and users (Operators, Users) of Softcon Systems – i.e. Softcon Products and Peripherals (Devices) that are used with Softcon systems.

These **Files** include System, Hardware (HW) and Software (SW) files:

- Documents:
Specifications, Pamphlets, Help, How2, Manuals, Connections (Lid Inserts),
- SW, FW:
Programs.
- Presentations and Videos:
Specifications, Installation.

2 GENERAL

All Files generated by Softcon start with the prefix **SCS_** (Software Control Services) and end (before the file extension) with the type (.help, .how2, .spec).

Generally, the Softcon files are not the source files (.pdf and not .docx) and the file name does not contain version numbers – version is shown within readable files.

All files are the latest version and may contain data and information that is not available or applicable to older versions of HW and SW.

Non-Softcon files naming structures depend on the company that generated the file.

Most of the files listed in this document are available on www.softconserv.com/downloads.

All are available on the Softcon USB Memory Stick.

This document is located in the SoftconUSB folder.

File List below lists all files in a table, giving a short description of the files.

If the file is installed in a Softwin3 system, the folder in c:\Softwin3 is shown.

File descriptions have hyperlinks (indicated with green and underline) to other locations within this document or to files located in the folders in the **SoftconUSB folder**.

Click on a file hyperlink will move the cursor to the appropriate section in this document or open the file in the appropriate folder (if available).

SW3 .help and .how2 files (documents) have hyperlinks (indicated with green and double underline) to other locations within that document or to files located in the folder **c:\Softwin3\help and c:\Softwin3\help\how2**.

In Softwin3 (SW3), version 1.4.62 or later, click on help topic opens the .help file linked to SW3 application (**c:\Softwin3\help folder**).

Older versions require a click on the appropriate .pdf file.

Click on SCS_Additions.bat in the folder SoftconUSB\Software\Softwin3\Additions, copies these files to the correct c:\Softwin3\help folder.

Depending on Windows security setting, opening documents could display **Security Warning** message and ask to continue opening – accept and allow.

The following abbreviations are used in this document:

Bat	Editable batch file, executing tasks (file move, copy, delete, zip; folder create)
CntrP	Controller (Control Panel)
Exe	Executable program
IOX	Input, output, reader expander
MSA	MicroSoft Access Data Base
Spec	Specification
SQL	Sequel database or script.
SW3	Softcon Softwin3 Software. If a folder, then c:\softwin3\

Legacy refers to older versions of FW or newer firmware in legacy mode.

Universal is newer versions of FW that provide enhancements to the legacy versions.

Setup up for legacy and universal require certain unique settings that is only available in newer versions of SW3 (after 1.4.60).
